

Jordan Lee

Synthetic AI Platform Engineer Candidate Brief

This fictional one-page resume is bundled only for Telic cookbook examples that demonstrate document intake, file transport, citation, and review workflows. It contains no real personal data.

Summary

AI platform engineer with experience building provider-agnostic model runtimes, async tool execution, retrieval pipelines, structured outputs, and observability for production LLM systems.

Selected Experience

2024-2026	Principal Engineer, Northstar Systems	Designed a multi-provider LLM execution layer with retries, cache controls, provider routing, bud
2021-2024	Staff ML Engineer, Atlas Works	Built document intelligence workflows with embeddings, citations, tool calling, structured extracti
2018-2021	Backend Engineer, Meridian Labs	Owned async Python services, PostgreSQL persistence, Redis-backed queues, CI reliability gat

Skills

Python, asyncio, OpenAI APIs, Anthropic APIs, Gemini APIs, tool execution, batch jobs, model catalogs, cost accounting, retrieval, PostgreSQL, Redis, Qdrant, FastAPI, OpenTelemetry.

Example Evaluation Note

The candidate should be routed to a technical interview focused on reliable model execution, observability, cache strategy, and provider abstraction tradeoffs.
